TOUCH SCREEN DISPLAY

The Touch Screen is a multi-function display consisting 320x240 dots featuring high intensity backlighting. In normal operation, the display indicates as above with the backlighting off.

During an event on the system the display shows the FIRST EVENT and LAST EVENT plus other events as space allows.

The last 2 lines are normally used to display the total number of events, but they are also used for scrolling fire conditions, faults, pre alarms or disabled devices independently or for displaying a reduced menu when in fire condition. When an event occurs the Touch Screen backlighting comes on unless there is a mains power supply fault.

Use the Touch Screen to scroll through all active events on the system by using the SCROLL UP and SCROLL DOWN buttons (available at access level 1). You can display the contents of the log and also view details of any fires, faults, pre-alarms, faults or disablements.

Supervisor	Fires	Pre	Faults	Disabled
FRE Off	0	Alarms 0	0	/Test
System Healthy XX Zones Active				
Tuesday dd-mm-yyyy				
16:25.25 BST On				

Pressing a field will highlight it and forward to the next screen as shown below.

Touch the screen here to view details.

Supervisor	Fires	Pre	Faults	Disabled
FRE Off	1	Alarms 0	0	/Test
System Healthy 10 Zones Active				
Tuesday dd-mm-yyyy				
16:25.25 BST On				

Supervisor	Fires	Pre	Faults	Disabled
FRE Off	1	Alarms 0	0	/Test
